

Testing the Water Quality of Our Lake

Periodically samples of Lake Kiowa water representing all coves and beach areas will be taken to TRAC Laboratories in Denton, TX for analysis. Samples will be tested for the presence of E.Coli, a common pathogen found in the feces of warm-blooded animals, including humans.

The State of Texas and the United States Environmental Protection Agency have established criteria and consider an average of 126 MPN/100ml as safe, and a single sample analysis of 394 MPG/100ml as acceptable. You can view their reports at:

[State of Texas](#)

[Environmental Protection Agency](#)

When the results of these tests are received back at Lake Kiowa we will post them here.
